Voucher included – public price for virtual training.

About this Training

The ISTQB® Certified Tester Advanced Level Agile Tester (CTAL-AT) Syllabus v2.0 defines the knowledge and skills required of experienced testers operating in Agile environments. It addresses Agile test strategy, whole-team collaboration, shift-left approaches, and contemporary Agile testing techniques and practices.

Learning Objectives

- Collaborate effectively in cross-functional teams, applying Agile values and principles.
- Adapt existing testing experience and knowledge to Agile contexts.
- Apply Agile test approaches and techniques to ensure adequate test coverage.
- Help define testable user stories, scenarios, requirements, and acceptance criteria.
- Design and implement Agile test approaches.
- Build the knowledge and confidence needed to pass the ISTQB® CTFL certification exam.

Program

Day 1	Test Strategy & Test Approach Challenges (test types, end-to-end testing, formal vs. holistic testing, regression approaches); People & Teams (whole-team approach, testers within the team)
Day 2	Test Management & Process Improvement (planning, monitoring, control, reporting, process improvement); Shift Left (improving test basis quality, requirements engineering)
Day 3	Agile Approaches & Test Techniques (exploratory testing, assisted testing, test smells); Test Automation & Test Tools in Agile; review, exam preparation & mock exam

Prerequisites

The ISTQB® Certified Tester Foundation Level (CTFL) v4.0, or a previous version, is required before taking the CTAL-AT certification.

Exam Information

- The ISTQB® Advanced Level Agile Tester exam consists of 40 multiple choice questions.
- A score of 65% is required to pass.
- Duration: 90 minutes, plus extra time for non-native language speakers.
