

ISTQB Foundation Training & Certification

Master the fundamentals of software testing and prepare for the ISTQB CTFL exam.

Duration	Format	Language	Price
3 Days	In-person / Virtual	EN / FR	1480€/participant, tax excl.

About this Training

The ISTQB® Certified Tester Foundation Level (CTFL) is the world's leading software testing certification. This training provides the essential knowledge and practical skills needed to understand software testing principles, design effective test cases, and contribute to software quality. Whether you are starting a career in testing or looking to strengthen your QA expertise, this course prepares you for both real-world testing and the ISTQB Foundation certification exam.

Learning Objectives

- Master the core concepts and principles of software testing.
- Understand how testing integrates into the Software Development Lifecycle (SDLC).
- Design effective test cases using industry-standard testing techniques.
- Select appropriate test levels, test types, and testing approaches.
- Contribute to the planning, execution, and monitoring of testing activities.
- Build the knowledge and confidence needed to pass the ISTQB® CTFL certification exam.

Program

Day 1	Introduction to Software Testing, Fundamentals of Testing, Testing Throughout the SDLC, Static Testing, Practical Exercises
Day 2	Test Analysis & Design, Black-Box Techniques, White-Box Techniques, Experience-Based Testing, Hands-on Exercises
Day 3	Managing the Test Activities, Test Tools, Review of Key Concepts, Mock Exam, Exam Preparation & Q&A

Prerequisites

No prior testing experience required. Basic knowledge of software development is recommended.

Exam Information

- The ISTQB Foundation Level exam consists of 40 multiple choice questions.
- A score of 65% (26/40) is required to pass.
- Duration: 60 minutes, plus extra time for non-native language speakers.
